JINTAIJIN

Surface finishing equipment and consumables

Vibratory finishing Buyer overview

Equipment selection starts with the workpiece, its starting condition and the required finish. This overview identifies one official product reference and the information needed for a useful application discussion.

Official product reference

OBD-ZL300C - 300L vibratory finishing machine with separator. The photograph and model description above come from the official Jintaijin product page. Confirm the required configuration and current specifications when requesting a quotation.

Prepare a useful application inquiry

Send the following information so the equipment, media and compound discussion can address your actual production requirement.

1 Workpiece

Material or alloy, dimensions, geometry, weight, and any delicate features or areas that must retain sharp edges.

2 Starting condition

How the parts are made, the current burr or surface condition, and photographs showing the areas of concern.

3 Production requirement

Batch quantity, part mix, planned throughput and the space or utilities available for the process.

4 Acceptance criteria

Target appearance and measurable inspection requirements, including any limits on edge rounding or dimensional change.

5 Process evaluation

Representative sample parts and agreed inspection criteria. Record the trial conditions before comparing outcomes.

Equipment and consumable scope

Jintaijin offers vibratory finishing machines and related finishing equipment, media and compounds. Use the official website to review current product families. Final selection depends on the application and the configuration agreed with the supplier.
